# The New Ozone Washing System ” ECOFree” Developed by Tonello

By [Staff](#) / June 13, 2014

*Sarcedo, Italy* - A long time in the making, it required the best of the company’s research laboratories and all technical staff.

Constant testing, experimenting and prototyping ultimately led to a washing system with all the advantages of traditional ozone technology, but now with considerable energy savings.

### **ECOFree offers:**

- 50-80% reductions in water consumption, depending on the process used;
- Shorter processing times;
- Lower water purification costs;
- Lower energy consumption;
- More denim contrast than with traditional ozone processes;

ECOFree is also highly flexible: it just needs a washing machine, which can also be used for the washing and stone-washing cycles.

All Tonello machines, both new and already operational, can be used for the process. This reflects their constant, resolutely customer-oriented approach, which means that machines can be updated only as required, in order to delay obsolescence for as long as possible.

An approach that is one of their strengths.
